

Perceptual Concept Team Teaching

Sensation & Perception

A.P. Psychology

Name _____

Date _____

Period _____

There are many processes that help our brains interpret sensory stimuli. Your task is to define and explain a concept to the class:

1. Pick a partner and **SIGN-UP** for a *perceptual concept*
2. Create a small (11x17) **POSTER** of your *perceptual concept* that includes:
 - a. The **NAME** of your *perceptual concept*
 - b. A **DEFINITION** of your *perceptual concept*.
 - c. At least one **PICTURE** that explains your *perceptual concept*. You may wish to have additional drawings for comparison. Depending on the concept, you may also want to show a short video. Images found on the web are acceptable. However, hand drawings or personal photos are preferred.
Be creative! Don't just draw what's in the book!!
3. Share your *perceptual concept* poster with a **1-2 minute PRESENTATION**.
During your presentation, supplement your concept with a **thoughtful EXPLANATION**.
